

How to master Soft filtering with our photo software and photoshop plugin

Now you can do traditional lens soft-filtering in your favorite photo software with this plugin for photoshop and other photo and graphic software. The plugin does exactly the same as a traditional lens soft filter. It lets you adjust both the filters strength as well as its softness. Use it for traditional softening or noise filtering.

• Power Retouche **Photoshop** plugins are also for **Paint Shop Pro, Corel Draw, Illustrator, Fireworks** and other graphic software or photo software for photo editing, retouching and restoration (Mac & Win) see [list](#)

Benefits of the plugin

Soft Filter plugin - Tutorial

- Create that intimate soft look of traditional lens soft filters
- Filter out noise
- Set the filter to any desired strength or effect

The Soft Filter filter plugin works with these image modes (Windows and Mac)...
8 & 16 bit / channel: RGB, Grayscale, Duotone, CMYK, Multichannel, Lab.

Soft Filter filter controls

This is the Soft Filter plugins control panel at one fourth size. Click on the photo or the links to see the plug-in at full size.

The filter has only two controls:

1. Effect % - the intensity of the softening.
2. Spread - the size of the softening.

Example -

The Soft Filter plugin is an exact digital equivalent of the classic lens soft filters.

The Soft Filter

These are the only controls.

Effect % determines how strong the soft filter should be.
Spread determines the size of the soft haze.

The soft filter is so simple, a few examples will suffice.

The photo to the right was filtered at various effect levels, but with the spread size 10 in all cases. A spread of 10 would normally be considered too high for such a small image, but for the sake of illustration it is fine.

Notice the spread and fade-out of the haze in the effect 100% example. It matches exactly the fade-out and spread of traditional lens soft-filters.

Like the traditional lens soft filters, you can use this filter to create a romantic and warm mood in the photo or as a noise filter.

Effect 25
Spread 10

Effect 50
Spread 10

Effect 80
Spread 10

Effect 100
Spread 10
